Company name:

Address:

ZIP code/Name place:

Country:

Manufacturer:

Veritas Vietnam JSC

**384 Hoang Dieu St., Dist. 4, Ho Chi Minh City
700000**

Vietnam

The production process of NetZero pallets initiates with the conversion of coconut husks into monomers, serving as the foundational constituents for complex polyphenolic polymers. These polymers are subsequently blended with coconut humus and specialized plant-based additives.

Following this, they are molded under a pressure of approximately 1300 Psi and a temperature of 400°F (200°C). This molding procedure ensures the complete eradication of any surviving vegetation or insects. Due to their unique manufacturing process and composition, NetZero coconut fiber pallets are classified as non-wooden packaging, abstaining from the utilization of solid wood packing materials.

They adhere meticulously to packaging specifications and international phytosanitary standards as stipulated in the IPPC-ISPM15 standard.

**We confirm that these NetZero coconut fiber pallets are heat processed,
and are considered as sufficiently processed and
free from any plant pests according to FAO-IPPC-ISPM15.**
